# Measurements

# 3D surface analysis

- Direct anthropometry
- 3D Cephalometry (CT/ CBCT)
- Ultrasounds
- Magnetic resonance
- Electromagnetic systems
- Electromechanical systems
- Optoelectronic systems
- Moiré/ fringe light projectors
- Laser scanning
- Stereophotogrammetry

- Simple, easy to use
- Danger free
- Fast
- Easy-to-manage data
- Treatment visualization and simulation
- Low cost

# Conventional anthropometry

## --single measurements

- ✓ Simple, easy to use
- ✓ Danger free
- ~~Fast~~
- ~~Easy to manage data~~
- ~~Treatment visualization and simulation~~
- ✓ Low cost

L.G. Farkas,  
Anthropometry of the  
head and face, 2nd Ed.  
New York: Raven Press,  
1994.

- Treatment visualization and simulation
- Low cost

Optical methods

# Stereophotogrammetry

Each object is seen in each instant by 2 TVCs (x, y): stereoscopic vision (x, y, z)

Ras et al. J Dent 1996;24:369-74  
 Burke & Hughes-Lawson, AJODO 1989;96:144-51

Optical methods

Università degli Studi di Milano, via Festa del Perdono 7 (MM2 Duomo)

# Subjects & Methods

- 11 Glut-1 syndromic subjects
- Females, 3 – 32 years
- 205 control subjects
- 42 landmarks for each face (ears excluded)

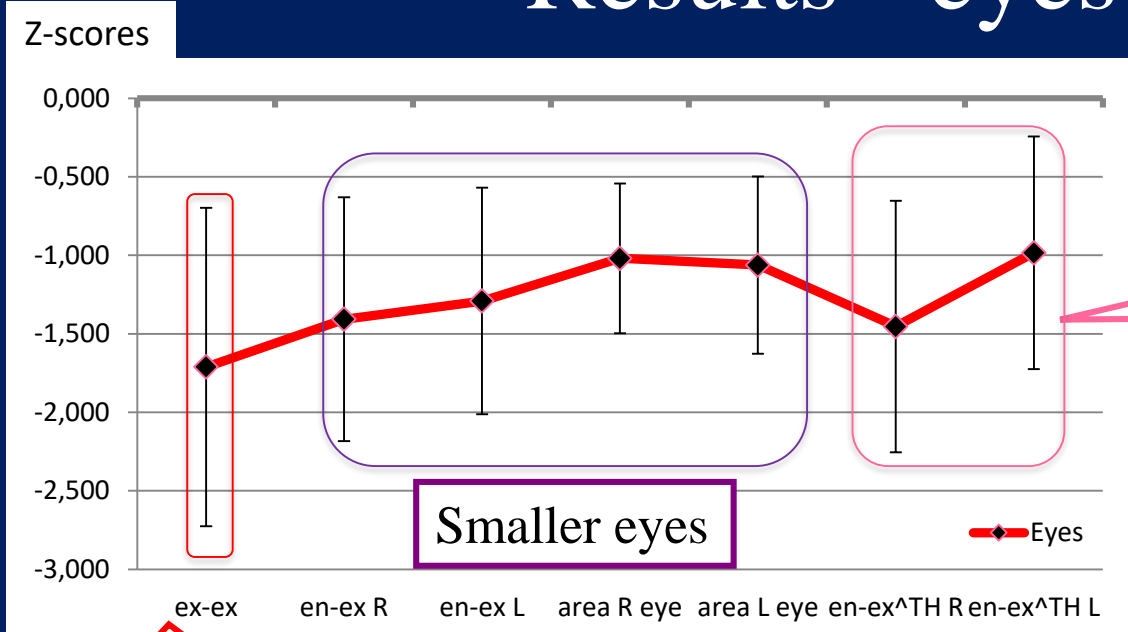

1. Landmark identification (skin)
2. Stereophoto
3. Landmark digitization (PC)
4. Calculations

- a. Landmark to landmark distances, ratios and angles (z-scores)
- b. Principal Component Analysis

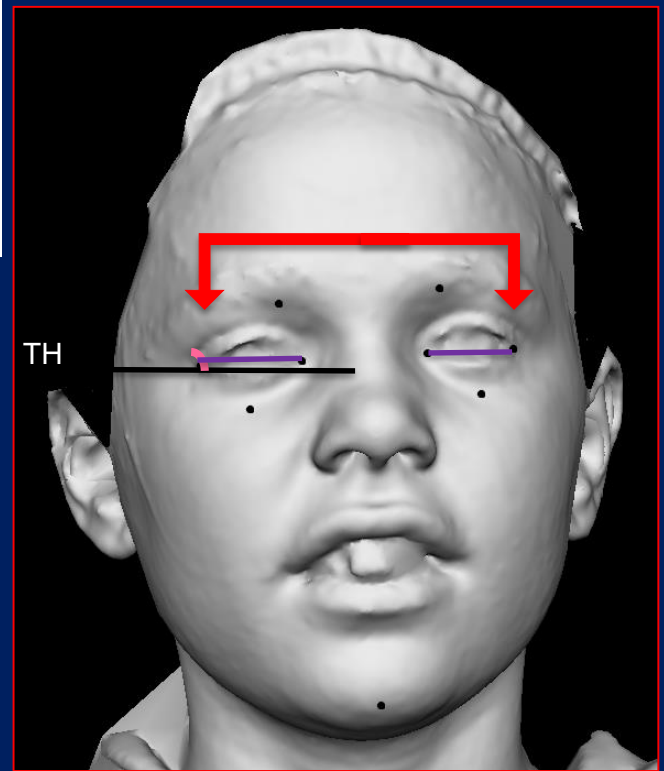

# Results - eyes

Down-slanted eyes

Smaller eyes

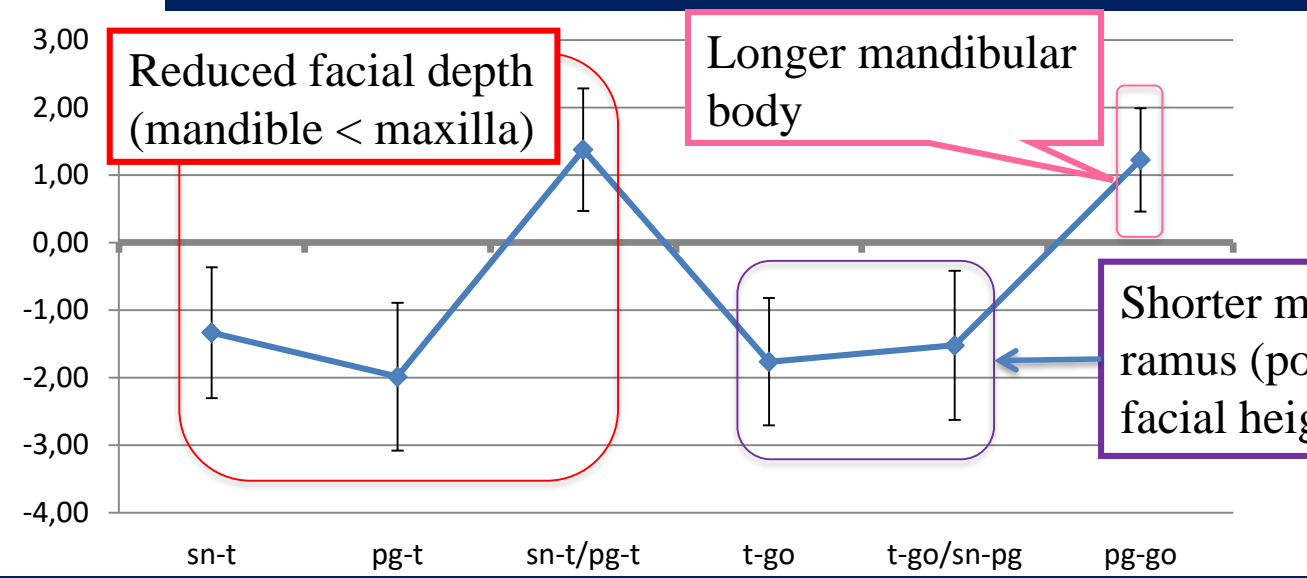

Reduced intercanthal distance

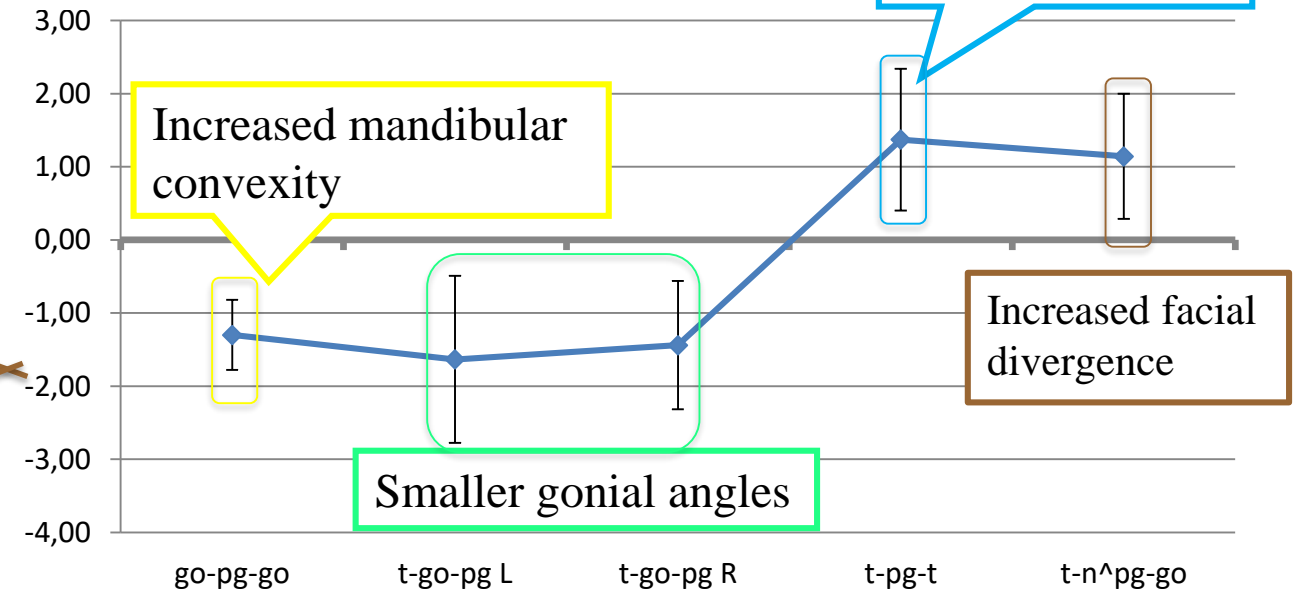

# Results - mandible

Z-scores

Z-scores

# Principal Component Shape Analysis

- i) Procrustes registration
- ii) Intra group analysis (controls, Glut1)
- iii) Inter groups analysis & stepwise linear regression

205 control subjects

- 1st principal component: 43% of face variability
- 1st-70th components: 99% of face variability

11 Glut-1 subjects

- 1st principal component: 24.9% of face variability
- 1st-9th components: 97% of face variability

Glut1: more homogenous faces

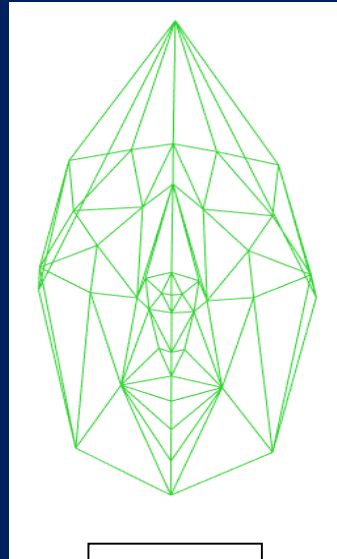

# PC1 – control subjects

explained variance: 43.6%

Mean -2 SD

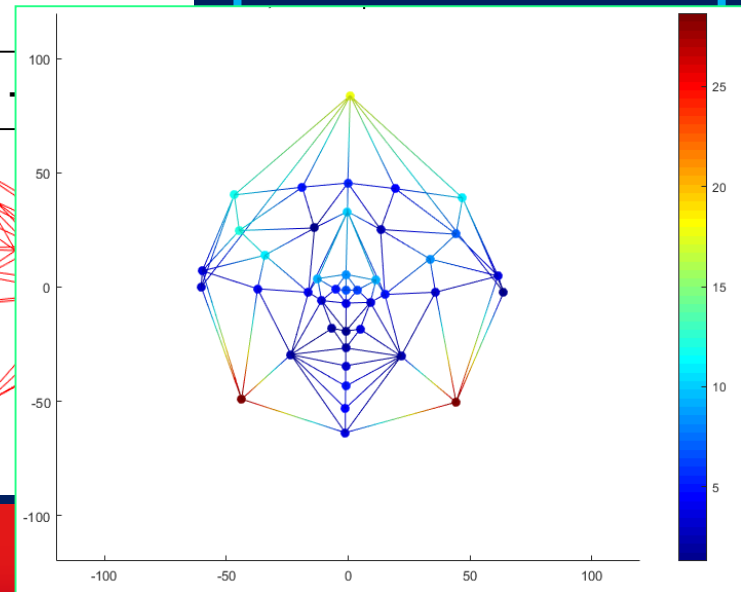

Mean

Mean

# Down syndrome

## Morphometry of the Orbital Region Soft Tissues in Down Syndrome

*The Journal of Craniofacial Surgery* • Volume 23, Number 1, January 2012

Chiarella Sforza, MD, PhD,\* Fadil Elamin, MSc, BSc, BDS, MOrthEd, FFDRCSI,†  
 Claudia Dellavia, DDS, PhD,\* Riccardo Rosati, DDS, PhD,\* Gianluigi Lodetti, DDS,\*‡  
 Andrea Mapelli, MBioEng,\* and Virgilio Ferruccio Ferrario, MD, PhD\*

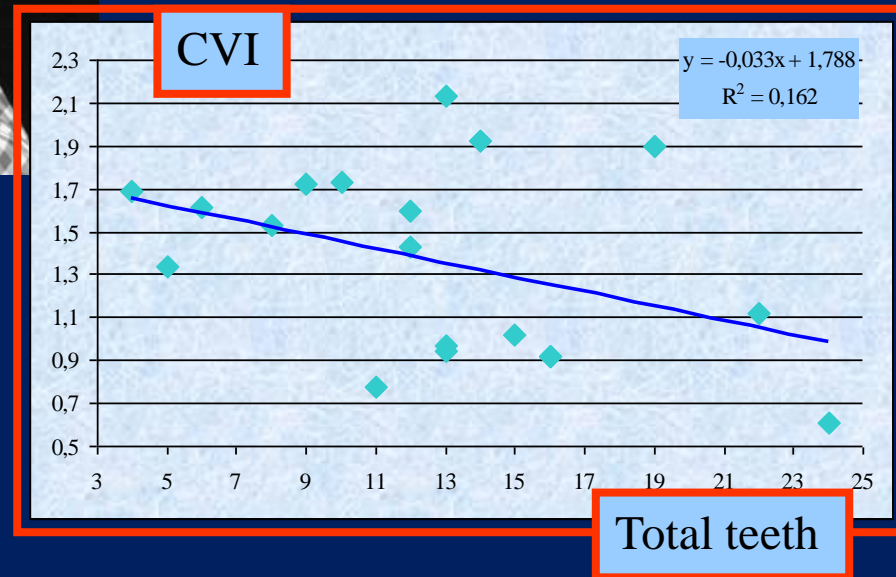

Larger deviations in Sudan than in Italy; no sex differences.

# Hypohydrotic ectodermal dysplasia (OMIM #305100)

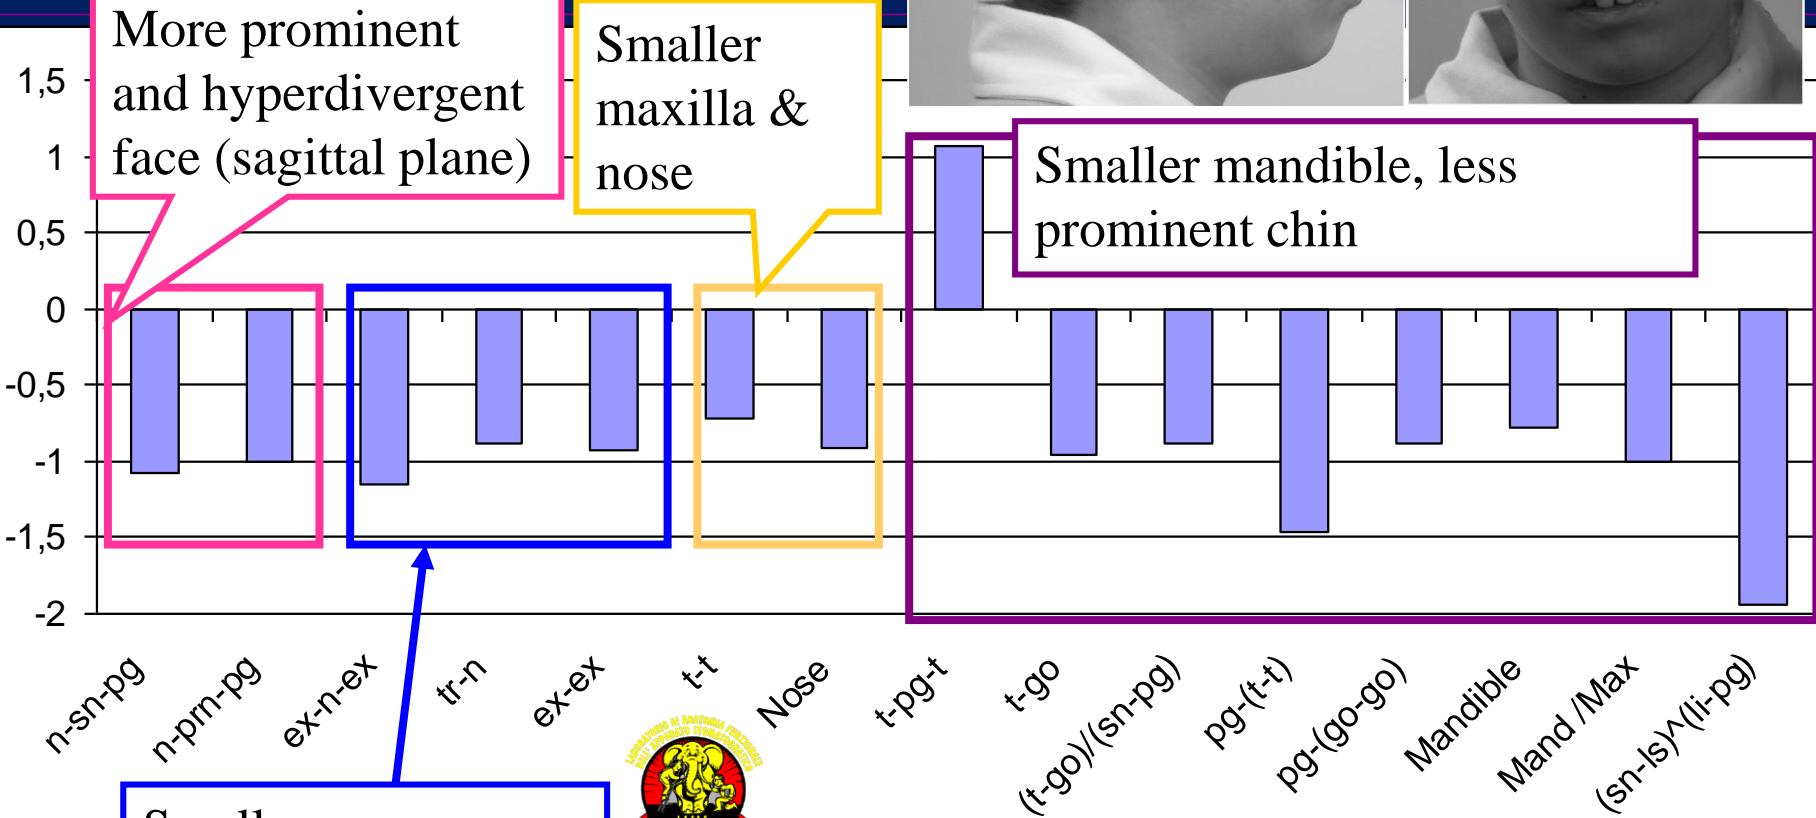

Flatter face, more acute nasolabial angle, prominent lips; less deviations with more teeth.

Ferrario et al. Am J Med Genet 2004; Sforza et al. Cleft Palate CJ 2004, 2006  
Dellavia et al. Angle Orthod 2006, 2010; Eur J Oral Sci 2008

# Moebius syndrome

Congenital facial palsy (facial nerve) & impairment of ocular abduction (abducens nerve) (OMIM %157900)
